

Application Notes:

- Circuit can be switched from the wireless switch and from the conventional light switches (3-way control shown).
- In most cases, only a single short cable from L1/L2 to 1/2 is required to convert a conventionally wired single-switch circuit to a 3-way hybrid circuit. Ideal for a non-invasive way of adding a switch to any room.
- Use the following kits:
 SMK-1 (Switch Module version)
 LSK-1 (Surface Mounted version)

Wireless link (see specs for maximum distance)

multi-way switching with two wired light switches
