

Application Notes:

-- Circuit can be switched from the wireless switch and from the conventional light switch (2-way control).

-- In most cases, only a single short cable from L1/L2 to 1/2 is required to convert a conventionally wired single-switch circuit to a 2-way hybrid circuit. Ideal for a non-invasive way of adding a switch to any room.

-- Use the following kits:

- SMK-1 (Switch Module version)
- LSK-1 (Surface Mounted version)

2-way switching with an existing conventional light switch
